## PROFESSIONAL SUMMARY

Results-driven DevOps / Cloud Engineer with hands-on experience building production-grade infrastructure on AWS and Kubernetes. Skilled in CI/CD pipeline automation, Infrastructure as Code (Terraform), containerization, and cloud-native system design. Background in Game & Interactive Media with a strong passion for automation, reliability engineering, and scalable systems. Currently seeking DevOps / Cloud / Platform Engineering roles where I can grow technically and contribute to high-impact, modern engineering teams.

## TECHNICAL SKILLS

|                                 |                                                                   |
|---------------------------------|-------------------------------------------------------------------|
| <b>Cloud:</b>                   | AWS (S3, SQS, DynamoDB, IAM, ECR, CloudWatch), Cloudflare Workers |
| <b>Container/Orchestration:</b> | Docker, Docker Compose, Kubernetes (K8s), HPA, Kustomize          |
| <b>CI/CD:</b>                   | GitHub Actions, OIDC Authentication, Trivy Security Scanning      |
| <b>IaC &amp; Config:</b>        | Terraform (Modular)                                               |
| <b>Monitoring:</b>              | Prometheus, Structured JSON Logging, CloudWatch                   |
| <b>Languages:</b>               | Python, Go, JavaScript, Bash, C# (Unity)                          |
| <b>Databases:</b>               | DynamoDB, MongoDB, Redis, Google Sheets API                       |
| <b>Message Queue:</b>           | RabbitMQ, AWS SQS                                                 |
| <b>Tools:</b>                   | Git, Linux, Docker Desktop, Firebase, FishNet (Unity)             |

## PROJECTS

### Hybrid OCR Pipeline : [github.com/anurinth-w/hybrid-ocr](https://github.com/anurinth-w/hybrid-ocr)

*AWS · S3 · SQS · DynamoDB · Terraform · GitHub Actions · Python · CloudWatch*

- Built production-grade async OCR processing system on AWS using S3, SQS, and DynamoDB with fully decoupled architecture
- Designed idempotent worker with DynamoDB conditional writes and safe state transitions (QUEUED → PROCESSING → DONE/FAILED)
- Implemented failure handling with retry logic, Dead Letter Queue (DLQ), and chaos testing across crash/transient/permanent failure scenarios
- Set up CloudWatch observability with custom metrics (latency, queue depth, DLQ) and operational alarms for proactive incident detection
- Automated CI/CD with GitHub Actions + OIDC — Docker images pushed to AWS ECR with zero static credentials stored

### DevOps Assignment — Production K8s Setup : [github.com/anurinth-w/devops-assignment](https://github.com/anurinth-w/devops-assignment)

*Kubernetes · Docker · GitHub Actions · Prometheus · AWS ECR · Kustomize*

- Designed multi-service Kubernetes architecture with separate API (2–5 replicas) and Worker deployments on Docker Desktop / EKS
- Implemented Horizontal Pod Autoscaler (HPA, CPU >70%) with readiness/liveness probes for zero-downtime reliability
- Built multi-stage Docker builds with Trivy vulnerability scanning (HIGH/CRITICAL) integrated into CI pipeline
- Configured environment separation (dev/uat/prod) using Kustomize overlays with kubeval manifest validation
- Automated image delivery to AWS ECR via GitHub Actions with OIDC — no static AWS credentials in secrets

### **Cinema Ticket Booking System** : [github.com/anurinth-w/cinema-booking](https://github.com/anurinth-w/cinema-booking)

*Go · Vue 3 · MongoDB · Redis · RabbitMQ · WebSocket · Firebase Auth · Docker*

- Built real-time cinema seat booking system in Go + Vue 3 with zero double-booking guarantee for 1,000 concurrent users
- Implemented Redis distributed lock (SET NX EX) with atomic Lua unlock script and keyspace notification for auto seat release
- Integrated RabbitMQ durable event bus for async audit logging with ACK/NACK — messages survive broker restart
- Deployed full stack via Docker Compose with Firebase OAuth, WebSocket real-time seat state broadcast, and CI via GitHub Actions

### **Kayaman Shop — Game Top-Up Order System** : [github.com/anurinth-w/kayaman-shop](https://github.com/anurinth-w/kayaman-shop)

*Cloudflare Workers · Firebase Hosting · Google Sheets API · Google Drive API · JavaScript*

- Built and deployed full-stack order management system for a real game top-up business handling ~400 orders/day in production
- Architected serverless backend on Cloudflare Workers with Google Sheets as database and Google Drive for file storage
- Developed customer portal ([order.kayamanshop.com](https://order.kayamanshop.com)) and admin dashboard with Google OAuth, staff whitelist, and full audit trail
- Implemented secure image proxy via Cloudflare Worker — no public Drive access; credentials stored as Cloudflare Secrets

## **WORK EXPERIENCE**

---

### **Software Developer / Automation Engineer** 2024 – present

*Langnam Development Co., Ltd.*

- Built internal automation tools and workflow scripts using Google Apps Script to streamline document processing
- Designed and maintained data pipelines integrating Google Sheets with external APIs
- Improved operational efficiency through workflow automation, reducing repetitive manual tasks significantly

### **IT Automation Engineer** 2025

*Kijrungrroj Entech Co., Ltd.*

- Built internal automation tools to streamline engineering document management
- Developed scripts to automate repetitive data entry and reporting tasks
- Collaborated with cross-functional teams to identify automation opportunities

## **EDUCATION**

---

### **Bachelor of Science — Game and Interactive Media** 2020 – 2023

*Bangkok University GPA 3.5*

- Coursework: Programming, Game Design, Multiplayer Networking, UI/UX, Project Management
- Developed multiplayer game project using Unity with FishNet networking framework

## **LANGUAGES**

---

Thai — Native | English — Intermediate (Reading/Writing proficient; actively improving spoken)
