TECHNICAL SKILLS

Cloud & Infrastructure	AWS (S3, SQS, DynamoDB, IAM, ECR, CloudWatch), Terraform
Containers & Orchestration	Docker (multi-stage builds), Docker Compose, Kubernetes (Deployments, HPA, Kustomize, Probes)
CI/CD & Security	GitHub Actions (OIDC authentication), Trivy security scanning
Monitoring & Observability	Prometheus, Structured JSON logging
Backend	Python, Flask, Go, boto3, REST API, idempotent worker design
Infrastructure as Code	Terraform (modular design)
Automation	Google Apps Script, Google Sheets automation

WORK EXPERIENCE

Founder / Business Owner Langnam Development Co., Ltd.

2020 – Present

- Managed and operated government contracting business
- Identified inefficiencies in document-heavy workflows and initiated automation solutions

Systems & Automation Engineer Langnam Development Co., Ltd.

2025 – Present

Project: Document Automation System | KijrungrajEntech Co., Ltd

- Designed document generation system converting structured form inputs into automated operational documents
- Built workflow automation using Google Apps Script and Google Sheets to reduce manual preparation
- Integrated LINE-based image submissions into structured forms for automated document generation

Project: Financial Data Validation System | Hospitality business, Asoke (client confidential)

- Developed automated financial validation tools to process operational datasets (~14,000 records)
- Built data validation logic to detect abnormal values and input errors across large datasets
- Reduced manual financial verification workload from ~14,000 records to ~8,000 through automated filtering

Game Programmer Wolf Eden Production

2022

- Developed gameplay mechanics, player interaction systems, and basic game logic
- Implemented movement, collision handling, and event-driven interactions

PROJECTS

DevOps Assignment — github.com/anurinth-w/devops-assignment

Production-ready DevOps setup on Kubernetes with full CI/CD pipeline

- Designed multi-service architecture with separate API and Worker deployments
- Implemented Horizontal Pod Autoscaler (HPA) with readiness/liveness probes
- Built multi-stage Docker builds with Trivy security scanning in CI
- Configured environment separation (dev/uat/prod) using Kustomize overlays
- Set up Prometheus metrics endpoint with structured JSON logging

- Automated image delivery to AWS ECR via GitHub Actions with OIDC auth

Hybrid OCR — github.com/anurinth-w/hybrid-ocr

Production-inspired async OCR processing system on AWS

- Built decoupled architecture using AWS S3, SQS, and DynamoDB
- Implemented idempotent worker design with at-least-once delivery handling
- Dockerized services with local orchestration via Docker Compose
- CI/CD pipeline with GitHub Actions OIDC auth to push images to ECR
- Terraform infrastructure for AWS resources

Kayaman Game Shop — github.com/anurinth-w/kayaman-shop

Full-stack order management system for a real game top-up business — production with hundreds of orders/day

- Built serverless API on Cloudflare Workers with custom JWT signing (Web Crypto API)
- Implemented role-based access control (4 tiers) and AES-256 password encryption
- Full audit log, password masking, and auto-deletion on order completion
- Multi-site Firebase Hosting with per-IP rate limiting on the Worker

EDUCATION

B.Sc. Game and Interactive Media

2020 – 2023

Bangkok University — School of Information Technology and Innovation

GPA 3.5
